M-Systems

S-WORLD ANGELWING (2019)

S-World Angelwing is the catch-all name for all S-World software systems and designs including the following:

The TBS™ (Total Business Systems) and S-Web™ (makes websites), S-World BES™ (Behavioral Economic Systems), S-World Film™, S-World TMS™ (Total Marketing System), S-World TFS™ (Total Financial Systems), S-World VSN™ (Virtual Social Network) and VBN™ (Virtual Business Network), S-World UCS™ Simulator et al., S-World AE (Aid Efficiency), S-World DCA™ (Dynamic Comparative Advantage), S-World PQS™ (Predictive Quantum Software), S-World TTEB™ The Theory of Every Business, Tax Symmetry, and other M-Systems.

S-World Š-ŘÉS-v6™ is currently the standout feature in the S-World Angelwing Economic Framework. This system is described in Supereconomics Part 3 'The How.'

Chapter 3 is an early article on Š-ŘĚŠ.

Chapter 7 is the making of Angel POP.

American Butterfly describes an economic system that mimics the cleverest of interactions within the fabric of our universe to achieve certainty and eliminate chaotic factors.

This book starts to unravel the mystery and magic of string theory, which would later become the primary influence in the network's design.

This book was not written with the same enthusiasm as books 1 to 3. Nonetheless, it has some points that endured, including the first Special Project - Experience Africa, and the following which is designed as a domino train; turn, but one domino and many others will fall in its wake.

Note! This graphic is the 2019 update, and the first alternate company would be Blue Origin.

Another important step was to nominate the S-World company
Experience Africa as not for profit.

Quite simply, we adopt the systems created for Villa Secrets, the TBS™ and other M-Systems for the safaris industry; a semi non-profit which, in time, shall boast of thousands of agents and as many properties, making bookings on a high 30% STO, where half is used for conservation.

And, in parallel, I wish to create stand-alone software for the safaris themselves

The diagram illustrates a network of franchises and websites. At the top left, text reads: "Other Franchises created For: Mergers Directors and Key Staff Property Mangers and Owners Concierge Companies". Below this is a box labeled "Websites". To the right, a box labeled "Websites" is connected to "Villa Secrets Cape Town Sales Website: 'Cape Luxury Villas.' Plus Property Sales Websites". Below this, another box labeled "Websites" is connected to "Other Franchises created for: Luxury Apartments Co. Architect Co. Luxury Safari Co. Luxury Travel Co.". At the bottom right, a box labeled "Websites" is connected to "Franchisee".

The brochure for "Experience Africa" features a cover with a lion's face and the text "Camp Jabulani 'The Elephant Rock Safari'", "10", "Keight Hudson from Cape Town", "Africa from the heart of the continent", "Experience Africa", "VOGUE", "ASTA", "CAPE VILLAGES", "Travel", and "Contact Us".

S-World - Experience Africa

For Benefit Project 1

Create a version of the Villa Secrets web framework, the TFBMS & M-Systems for Safari Lodges. Free from royalties, but instead safaris pay 12.5% of turnover towards the fight against poaching.

If the average safari makes \$400,000 a year, and half the safaris used our systems, we would generate a hundred million dollars a year for this fight!!!

Target 2,000 safaris before 2020

Villa Secrets Cape Town & Africa Organogram

Franchisor

Special Project One

Experience Africa

www.angeltheory.org/m7b.pdf

17th December 2016

S-World - Experience Africa 1.01 (23rd Oct 2016)

5,038 KB

3,705 Words

21 Pages

www.ExperienceAfrica.com

Over the past 5 years, over 150,000 elephants have been killed for their Ivory.

With populations in Western and Central Africa virtually gone, the mass killing is now spreading to East and Southern Africa. The Criminal Network smuggle the raw ivory into China where it is carved into luxury items, fuelling a multibillion-dollar trade.

If the trade continues, the African Elephant could become extinct within 15 years.

The Ivory Game – A Netflix Documentary

<https://theivorygame.com>

Experince Africa

Poachers kill African Elephants every 15 minutes. The funds for protecting Africa's elephants and other wildlife is tiny compared to the 8 to 15 billion dollars that poaching is said to generate each year.

In terms of making the network and software, it absolutely has to be constructed by masters. I desire a Chan Zuckerberg, Bill and Melinda Gates production with assistance from Elon Moss, Richard Branson, Sergey Brinn and Larry Page.

www.AngelTheory.org

S-WORLD ANGEL THEORY

Because I was inspired to write this by my angel Sienna, the name Angel Theory seemed correct. But, as eight years on, as the work is far beyond what I should be capable of, I consider these wise words...

“When you have excluded the impossible whatever remains, however improbable, must be the truth.”

And think, maybe the work really is heaven-sent.

Special Projects

But, in general, Angel is for good and 'how can we do the most good.'

How can we do the most good?

Angel POP

"How can we
Accomplish as Much
Good as Possible?"

Professor Stephen Hawking

"The laws of nature are meant to economically compress a number of particular cases into one simple formula."

M-Theory
An economic science?

Stephen Hawking

"If we do discover a complete theory, it should in time be understandable in broad principle by everyone, not just a few scientists.

*And when that happens,
all of us will be able to discuss the why rather than the how."*

M-Theory
An economic science?

Hawking on M-Theory

"**M-Theory** is the only candidate for a complete theory of the universe."

A Good Model

“A model is a good model if it:

1. Is elegant

Elegance is not something easily measured, but it is highly prized amongst scientist because laws of nature are meant to economically compress a number of particular cases into one simple formula.

Elegance refers to the form of a theory, but it is closely related to a lack of adjustable elements since a theory jammed with fudge factors is not very elegant. To paraphrase Einstein, ‘a theory should be as simple as possible, but not simpler.’

2. Contains few arbitrary or adjustable elements
3. Agrees with and **explains all existing observations**
4. **Makes detailed predictions** about future observations that can disprove or falsify the model if they are not borne out.”

From The Grand Design by Professors **Stephen Hawking, Leonard Mlodinow**

Thomas Piketty – Capital in the Twenty-First Century

2018 was spent learning economics, in answer to Hawking's prescription for a Good Model Part 3. "Agrees with and explains all existing observations."

This book is very scrappy and wrong at times but, as Piketty says, "At least it has the merit of existing."

With Sienna now, I could think of worse guides to have.

XoXo

A close-up portrait of Nelson Mandela, resting his chin on his hand, with a thoughtful expression.

Nelson Mandela

"It always seems impossible, until it is done"

In this breakthrough chapter, as butterfly effects turn to ripple effects, it was realised that if planned correctly, targeted ripple effects within the systems software could mean that the creation of a Net-Zero City in a county in abject poverty could create the special projects in its wake. The Special Projects would be ripple effects of the creation of the City.

A wide-angle shot of an African savanna at sunset. Several elephants are visible in the foreground and middle ground, with acacia trees in the distance under a dramatic, cloudy sky.

The name Paradigm Shift is a wink to Nobel laureate Richard Thaler's book *Misbehaving: The Making of Behavioral Economics*.

“But I had certainly read Kuhn's path-breaking book *Structure of Scientific Revolutions*,’ and had secretly spent idle moments wondering if anything like a paradigm shift could ever be possible in economics.”

Angel Theory – Paradigm Shift

WELCOME TO ANGEL THEORY - VOLUME 1. PARADIGM SHIFT

A series of 8 books designed to 'move the masses in the desired direction, shaping if not predicting the future.' - (Isaac Asimov).

“You may not predict what an individual may do, but you can put in motion things that will move the masses in a direction that is desired, thus shaping if not predicting the future.”

A Good Model

"A model is a good model if it:

1. Is elegant

Elegance is not something easily measured, but it is highly prized amongst scientist because laws of nature are meant to economically compress a number of particular cases into one simple formula.

Elegance refers to the form of a theory, but it is closely related to a lack of adjustable elements since a theory jammed with fudge factors is not very elegant. To paraphrase Einstein, 'a theory should be as simple as possible, but not simpler.'

2. Contains few arbitrary or adjustable elements
3. Agrees with and **explains all existing observations**
4. **Makes detailed predictions** about future observations that can disprove or falsify the model if they are not borne out."

S-World Film & Behavioral Economic Systems

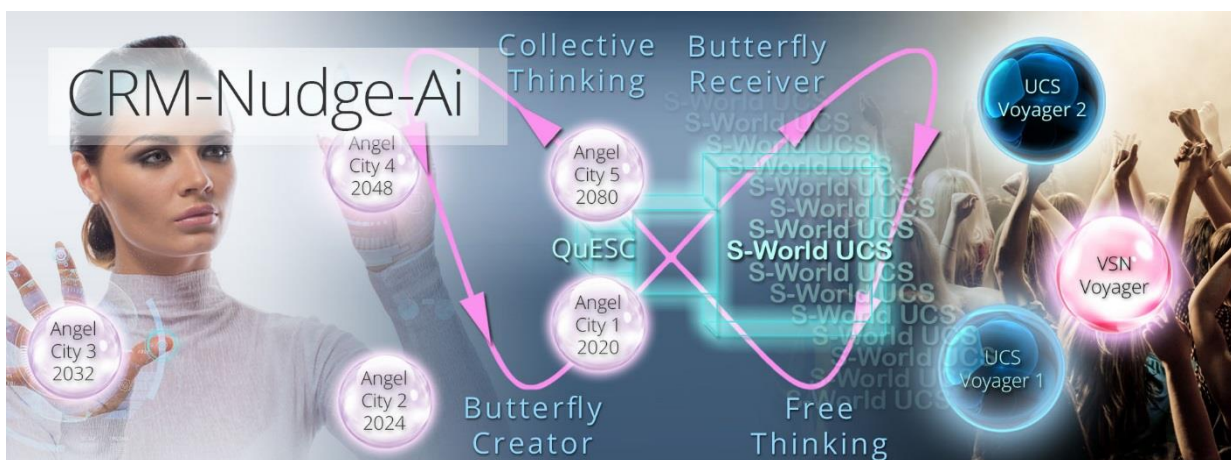

‘Could we use behavioural economics to make the world a better place?’

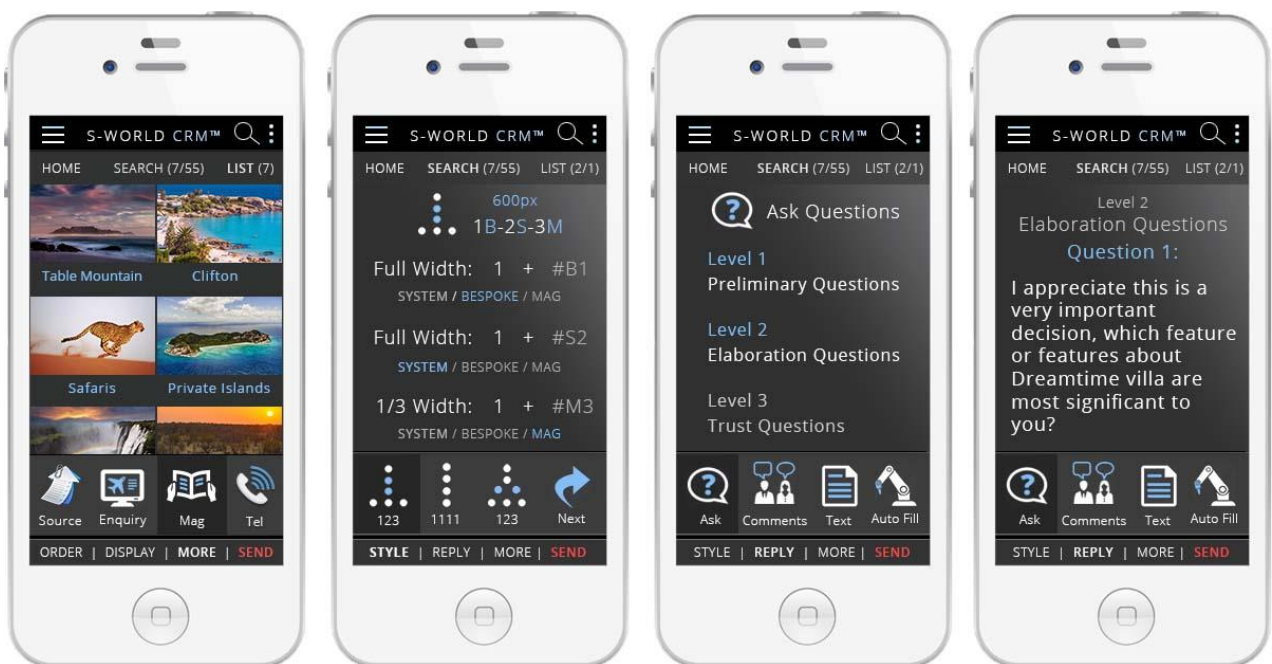

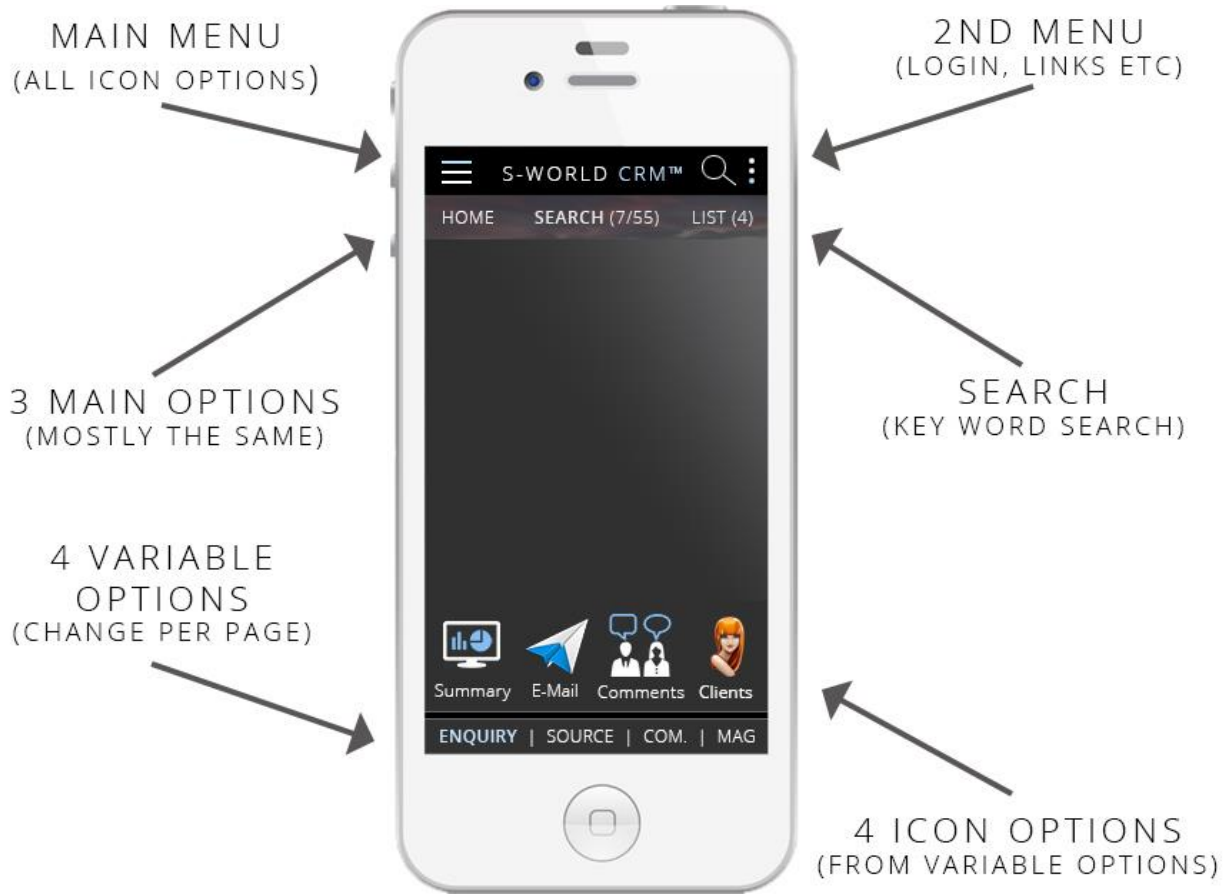

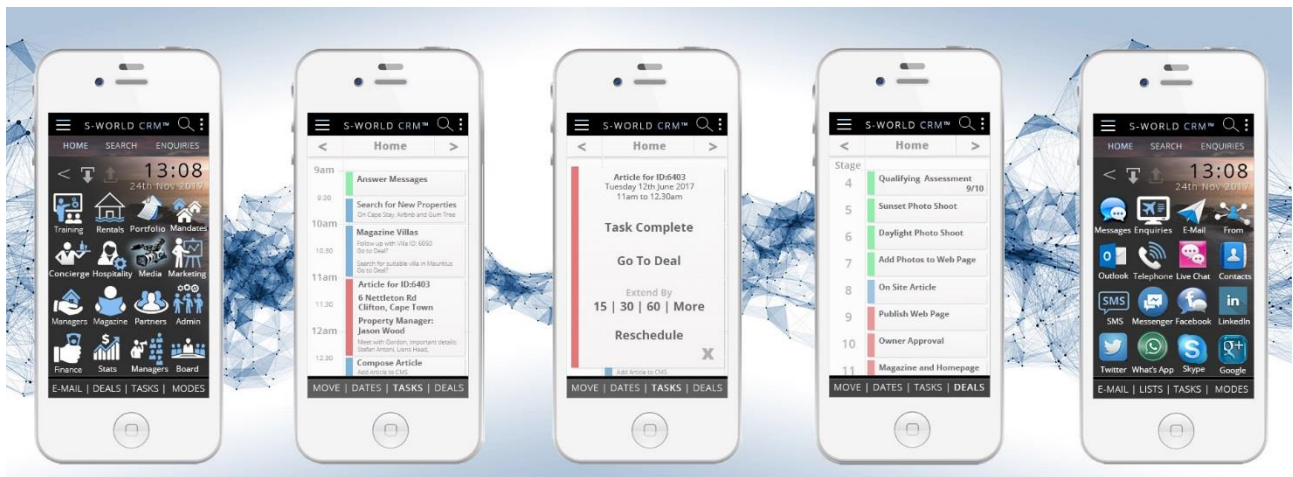

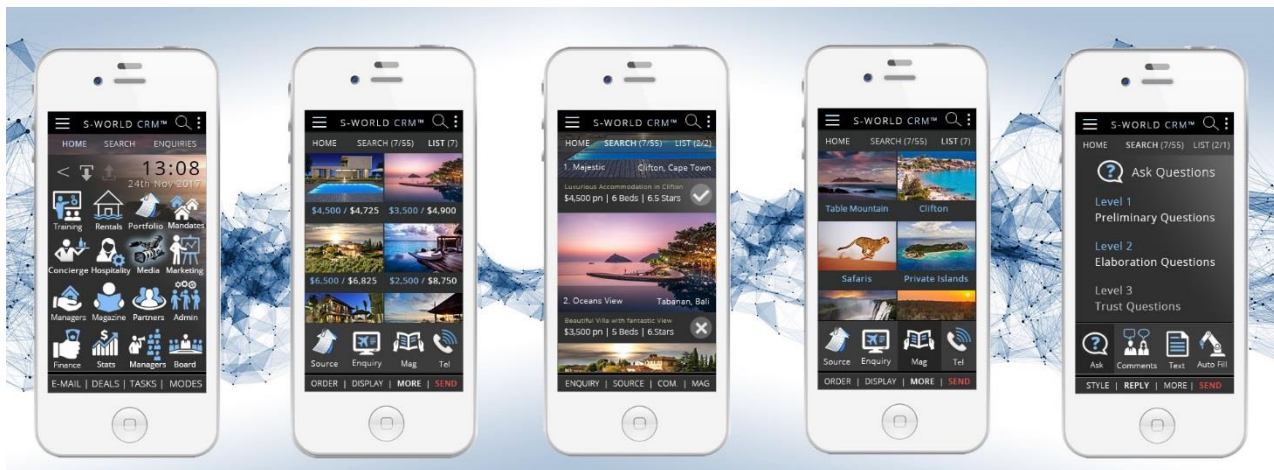

Behavioural scientists have a lot of wisdom to offer to help make the world a better place. Let's use their wisdom by carefully selecting nudges based on science and then subjecting these interventions to rigorous tests.

Nothing would help the cause of behavioural economics more than to show that behavioural biases matter in financial markets.

S-World VSN™

VIRTUAL SOCIAL NETWORK

From American Butterfly Book 1

The Theory of Every Business (2012/13)

Chapter Seven

Sienna's World

"S-World is an abbreviation for Sienna's World, named after my daughter, the most beautiful baby in the world. I know every father says that about his daughter, but one has to admit she's a cutie. On informing my father about the make-up of the business and networking software plus my decision to name it after Sienna, he came up with a rather pertinent acronym.

Super **I**ntelligent **E**ngine for **N**ew **N**etwork **A**ccess

As the environment the SIENNA software lives in is to be a Virtual World, the word "World" was added, thus resulting in making Sienna's World shortened to "S-World." Within S-World's Virtual World, Sienna will appear as an Angel helping to bring attention to specific items of interest."

A More Creative Capitalism

Remarks of Bill Gates, Harvard Commencement 2007

Starting about halfway through...

“But taking a serious look back ... I do have one big regret.

I left Harvard with no real awareness of the awful inequities in the world – the appalling disparities of health, and wealth, and opportunity that condemn millions of people to lives of despair.

I learned a lot here at Harvard about new ideas in economics and politics. I got great exposure to the advances being made in the sciences.

But humanity’s greatest advances are not in its discoveries – but in how those discoveries are applied to reduce inequity. Whether through democracy, strong public education, quality health care, or broad economic opportunity – reducing inequity is the highest human achievement.

I left campus knowing little about the millions of young people cheated out of educational opportunities here in this country. And I knew nothing about the millions of people living in unspeakable poverty and disease in developing countries.

It took me decades to find out.

You, graduates, came to Harvard at a different time. You know more about the world’s inequities than the classes that came before. In your years here, I hope you’ve had a chance to think about how – in this age of accelerating technology – we can finally take on these inequities, and we can solve them.

Imagine, just for the sake of discussion, that you had a few hours a week and a few dollars a month to donate to a cause – and you wanted to spend that time and money where it would have the greatest impact in saving and improving lives. Where would you spend it?

For Melinda and for me, the challenge is the same: how can we do the most good for the greatest number with the resources we have.

During our discussions on this question, Melinda and I read an article about the millions of children who were dying every year in poor countries from diseases that we had long ago made harmless in this country. Measles, malaria, pneumonia, hepatitis B, yellow fever. One disease I had never even heard of, rotavirus, was killing half a million kids each year – none of

them in the United States.

We were shocked. We had just assumed that if millions of children were dying, and they could be saved, the world would make it a priority to discover and deliver the medicines to save them. But it did not. For under a dollar, there were interventions that could save lives that just weren't being delivered.

If you believe that every life has equal value, it's revolting to learn that some lives are seen as worth saving and others are not. We said to ourselves: "This can't be true. But if it is true, it deserves to be the priority of our giving."

So we began our work in the same way anyone here would begin it. We asked: "How could the world let these children die?" The answer is simple and harsh. The market did not reward saving the lives of these children, and governments did not subsidize it. So, the children died because their mothers and their fathers had no power in the market and no voice in the system. But you and I have both

We can make market forces work better for the poor if we can develop a more creative capitalism – if we can stretch the reach of market forces so that more people can make a profit, or at least make a living, serving people who are suffering from the worst inequities. We also can press governments around the world to spend taxpayer money in ways that better reflect the values of the people who pay the taxes.

If we can find approaches that meet the needs of the poor in ways that generate profits for business and votes for politicians, we will have found a sustainable way to reduce inequity in the world.

This task is open-ended. It can never be finished. But a conscious effort to answer this challenge will change the world."

The Eight Way – 100 Places where we agree

This exercise was started as an answer to Professor Hawking's Point 3 of a good model

3. Agrees with and **explains all existing observations**

The begging of a conversation with Kate Raworth and others about compiling the book 100 Economic Reasons Why. The third book in the 'More Creative Capitalism' series.

In The Eight Way – 100 Places Where We Agree we find so far 74 extracts that I have commented on. To these 74 points, we add my points from the following books. Collectively giving about 250 places where great minds agree with S-World economics.

Capital in the Twenty-First Century by Thomas Piketty
A Concise Guide to Macroeconomics by David A. Moss.
Misbehaving by Richard H. Thaler
Nudge by Richard H. Thaler and Cass R. Sunstein
Poor Economics by Abhijit V. Banerjee and Esther Duflo
Why Nations Fail by Daron Acemoglu, James A. Robinson
The Bottom Billion by Paul Collier
Straight talk on Trade by Dani Rodrik
End This Depression Now! by Paul Krugman
The Plundered Planet by Paul Collier
Creating A Learning Society by Joseph E. Stiglitz
Finance and the Good Society by Robert J Shiller
Reinventing Capitalism in the Age of Big Data by Viktor Mayer-Schonberger
The Curse of Bigness: Antitrust in the New Gilded Age by Tim Wu
The Future of Capitalism by Paul Collier
Doughnut Economics by Kate Raworth
Superforecasting by Philip Tetlock and Dan Gardner
Thinking in Systems by Donella H. Meadows
Upheaval: Turning Points for Nations in Crisis by Jared Diamond

Thinking in Systems

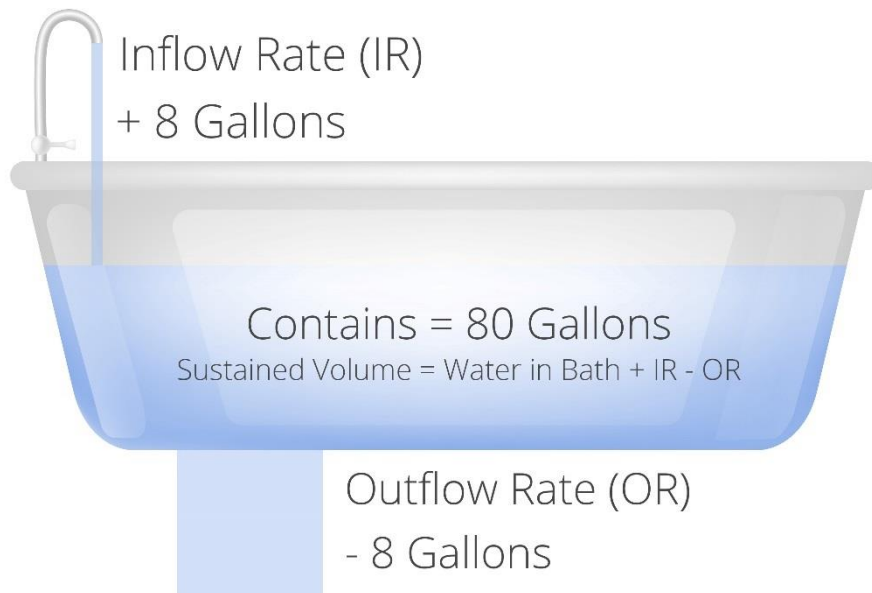

By Donella Meadows

“A system is an interconnected set of elements that is coherently organised in a way that achieves something. A school is a system. So is a city, and a factory, and a corporation, and a national economy.

A stock is the foundation of any system. Stocks are the elements of the system that you can see, feel, count, or measure at any given moment. If you understand the dynamics of stocks and flows and their behaviour over time, you will understand a good deal about the behaviour of complex systems. And if you have had much experience with a bathtub, you understand the dynamics of stocks and flows.

Imagine a bathtub filled with water, with its drain, plugged up, and its faucets turned off. Now mentally pull the plug. The water runs out, of course. The level of the water in the tub goes down until the tub is empty. Now imagine starting again with a full tub, and again open the drain, but this time, when the tub is about half empty, turn on the inflow faucet, so the rate of water flowing in is just equal to that flowing out. What happens?

The amount of water in the tub stays constant at whatever level it had reached when the inflow became equal to the outflow. It is in a state of dynamic equilibrium - its level does not change, although water is continuously flowing through it.”

In the illustration above, we see the Donella Meadows bathtub in dynamic equilibrium. Note that, for illustrative purposes, I have visually enlarged the width of the outflow of water down the drain by a factor of ten.

Donella continues:

“The human mind seems to focus more easily on stocks than on flows. On top of that, when we do focus on flows, we tend to focus on inflows more easily than outflows. Therefore, we sometimes miss seeing that we can fill a bathtub not only by increasing the inflow rate but also by decreasing the outflow rate.”

Or by recycling...

If one can decrease the outflows in this system, say by recycling the water, then one could quickly build up a large stock. Not particularly useful in the bathtub system as the water would flow over the top; but if instead of water, if our stock was money in a bank, it could rise and rise. Alternately, a system could continue to deliver the same output but with far less input. Businesses in such a system would be able to outcompete a business that was not within such a system.

For example, if 90% of the money in a network of business was redistributed/spent only with other businesses in the same network, and a typical business cost is 80% of cash flow, then a typical business within that network would have paid all its costs before trading on day one; whereas a business on its own needs to win enough new business to pay 80% of its cash flow to costs.

“System thinkers see the world as a collection of stocks along with the mechanisms for regulating the levels of the stocks by manipulating flows.”

Š-ŘÉŠ v6 in 1250 words

The Eighth Way for Kate Raworth

With the above in mind, here is an addition to the illustration, which presents a new element: 'Recycle Efficiency' the É in Š-ŘÉŠ equation.

Š-ŘÉŠ Financial Engineering v6

DONELLA MEADOWS EFFICIENT BATHTUB IN DYNAMIC EQUILIBRIUM

Above, we see that by recycling 90% of the water, we can reduce the inflow necessary to sustain equilibrium by a factor of 10, from 80 gallons to 8 gallons.

Of course, recycling bathwater, if already used, is not desired. So, let us change to a stock that is often spent and re-spent...money!

Money

Š-ŘÉŠ Financial Engineering v6

S-WORLD NETWORK IN SIENNA EQUILIBRIUM

Above, we see a plan to increase the cash flow in a Network City.

Network Cities are large carbon net-zero property developments, business, and industry; first described in 2011 as [New Sparta - City of Science](#), a variant of Paul Romer's Charter City concept, also seen as the Orlando Network in 2012 and 2013 in www.AmericanButterfly.org.

Now, let's identify all the letters in the Š-ŘÉŠ equation, which to be accurate is (Š+Ř) x É x Š.

1. É is for 'recycle Éfficiency'
In this case, É = 90%, so 90% of the money that would have escaped down the drain is captured, conserved, and returned to the network.
2. Š is for Špin
Špin is the number of times the system completely recycles. In the illustration above, we see this only once, so Špin = Š₁.
3. Š is for savings, written Šavings
This is the amount of cash flow left after the last Špin, which carries over as Šavings in the following year.
4. Ř is for Revenue, how much money is needed to top up the system. It is a combination of investment, sales, exports, and aid that the Network City receives within a year.

É - The Recycle Efficiency process explained

The way we recycle money in a Network City is to create a network of business that mostly buy from each other. When É is at 90%, then the network of businesses is spending 90% of their cash flow with other network companies (not unlike SpaceX or Virgin Orbit).

This requires the Sienna Equilibrium, Tax Symmetry, Spartan Contracts, and the S-World Angelwing software to facilitate. For more on these items, I am preparing addendums and an online index to the twenty-five books and essays written on the subject since 2011.

Paul Samuelson plumbing pipes image and the Sienna Equilibrium

Whilst I worry about showing the Samuelson graphic for all that is missing, it does help to illustrate the core principle behind how the Sienna Equilibrium works.

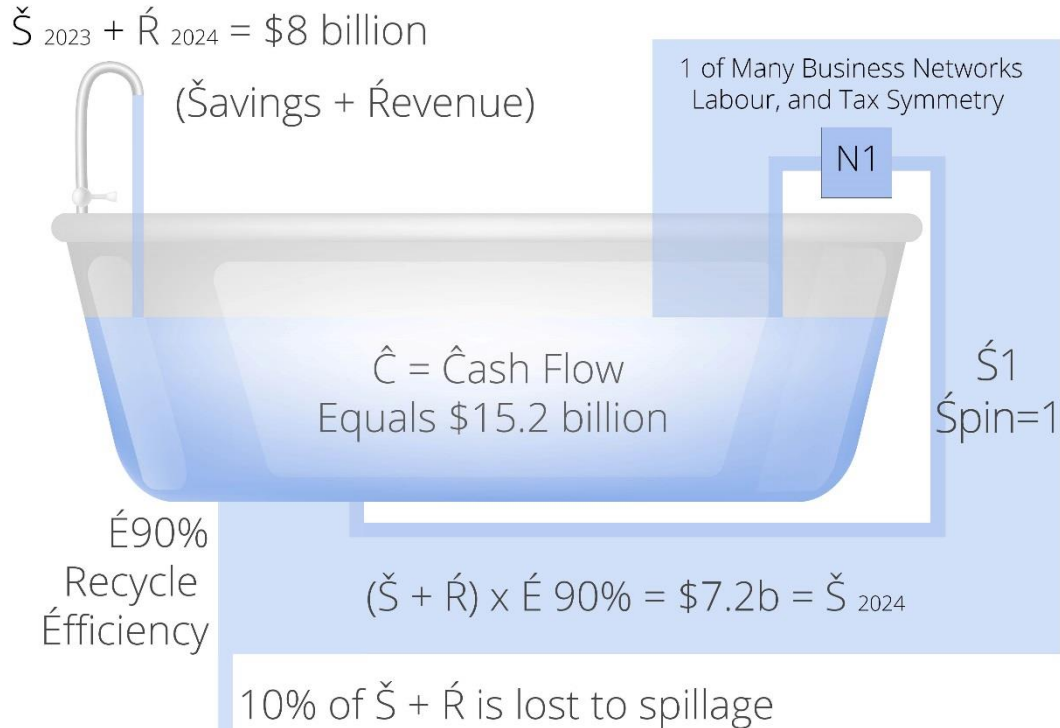

The Sienna Equilibrium considers tens of thousands of businesses within a digital framework/network, which have a balance of trade so that each is buying from each other; in many cases in the form of tenders coordinated by the S-World Angelwing software, and then the government and labour's Network Credits spending mostly on network goods and services.

As a result, we can attain a recycle Efficiency of 90%, then 95%, and in later years 99%, in which most businesses, the government, investors, and labour are all almost exclusively buying from each other.

Cash Flow

Š-ŘÉŠ Financial Engineering v6

S-WORLD NETWORK IN SIENNA EQUILIBRIUM

Cash Flow is the main product of Š-ŘÉŠ v6 Financial Engineering.

We see this highlighted in the video for network History 2 which plots a Network City in Malawi from 2024 to 2080, see www.angeltheory.org/video/25; and History 3 which does the same but with less Řevenue, see www.angeltheory.org/video/34.

In addition, in History 2, we see how Š-ŘÉŠ battles and wins against three global recessions, without once lowering its Ĉash Flow, even as all money from trade stops.

Spin

Š-ŘÉŠ Financial Engineering v6

2024 Ćash Flow = \$15.2 billion

Above, we see an illustration that gives detail to Špin.

Starting on January 1, 2024, with a \check{S} + \check{R} of \$8 billion in USD, deposited in cash in the network's central bank, every business in the network is directed to spend all their money before August 2024. All \check{T} ender transfers are done automatically by the Angelwing software; and except for \check{E} leakage, the cash is always in the bank.

The result is that, in August 2024, the network now has \$7.2 billion in Ćash Flow recycled from the first Špin. Now, the process is repeated, and the money is spent again before the end of the year. The result is the network increases its Ćash Flow/money supply from \$8 billion to \$15.2 billion and \$6.48 billion is conserved as \check{S} avings for the following year.

Donella Continues:

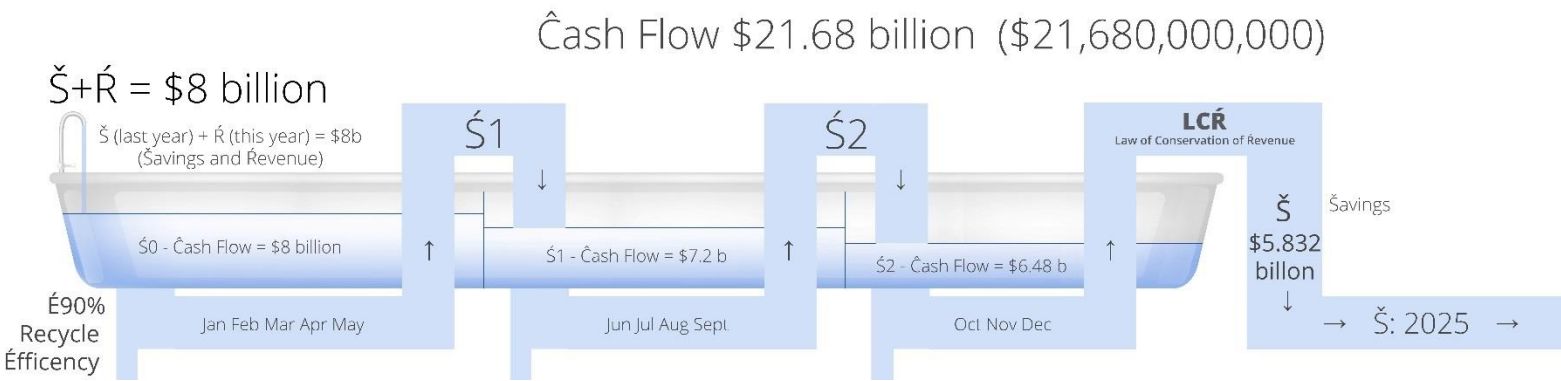

Consider industrial production - the more machines and factories (collectively called 'capital') you have, the more goods and services ('output') you can produce. The more output you can produce, the more you can invest in new machines and factories. The more you make, the more capacity you have to make even more. This reinforcing feedback loop is the central engine of growth in an economy.

Reinforcing feedback loops are self-enhancing, leading to exponential growth or runaway collapses over time. They are found whenever a stock has the capacity to reinforce or reproduce itself.

Donella Meadows – Thinking in Systems

Spin 2

Š-ŘÉS Financial Engineering v6

Above, we see the system at Špin 2, this time creating Ĉash Flow of \$21.68 billion, and saving \$5.832 billion.

Below, we see ‘the ŘÉS Calculator’ which plots the same exchanges seen above on the Š-ŘÉS-v6-Financial-Engineering spreadsheet.

	Šavings + Řevenue	É	Cash Flow	Špin	Days	Spend By
Šavings:	\$ 7,200,000,000					
Řevenue:	\$ 800,000,000					
Š + Ř	\$ 8,000,000,000		\$ 8,000,000,000	0	150	30 May 2024
	\$ 8,000,000,000	90.00%	\$ 7,200,000,000	1	120	27 September 2024
	\$ 7,200,000,000	90.00%	\$ 6,480,000,000	2	95	31 December 2024
	\$ 6,480,000,000	90.00%	\$ 5,832,000,000	3		Š Next Year 2025
			\$ -5,832,000,000			
	Year's Cash Flow		\$ 21,680,000,000		365	
			271%			Increase to the money supply
	LCR in 2024		\$ 5,832,000,000			Šavings for 2025
	The Law of Conservation of Revenue					

Spreadsheet Tab: Š-ŘÉS v6 / Bathtub History 4b

But why stop at Špin 2, after Špin 2 can come Špin 3, Špin 4, Špin 5, Špin 6, Špin 7 and on and on, quicker and quicker, more and more, up to Špin 32.
Of course, the more Špin, the higher É is needed; but increasing É is a craft that the Network City learns over decades, and it's likely that some sectors Špin more than others.

History 3

In History 3, described here: [video/34](#), we continue this idea starting at Špin 1, increasing by 1 Špin each year until, by 2055, Špin is at 32, and the Malawi Network has a cash flow of 2.3 trillion dollars, a 2900% increase in the money supply.

In the same way, increasing the money supply by the RRT method (Reserve Rate Technique) has increased the money supply from US banks to business by up to 900%; which, of course, led to a similar increase in output. Š-ŘÉŠ does the same for the businesses and industry attached to a Grand Network, increasing the money supply and so increasing cash flow and the output of the system.

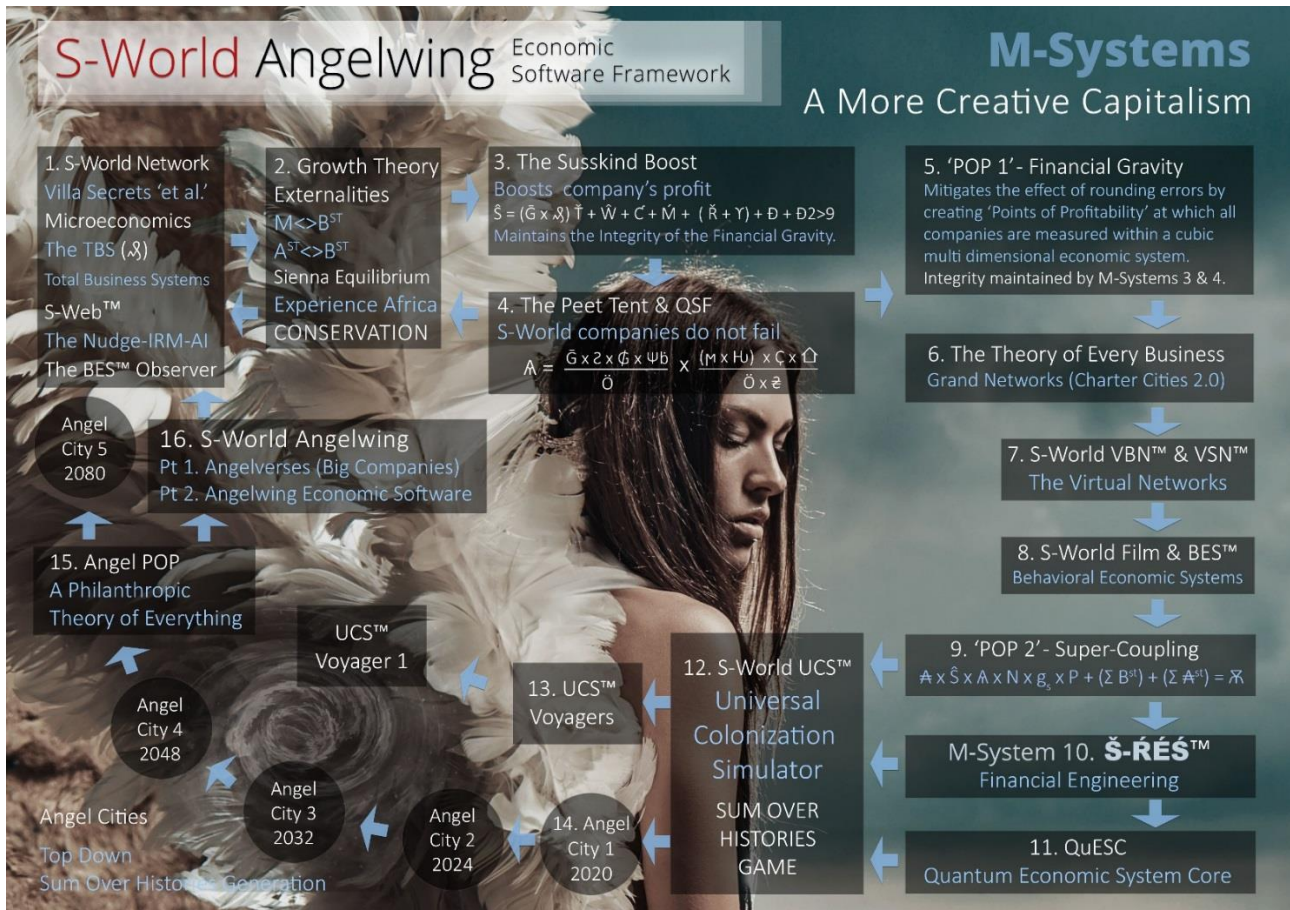

It may take decades for business and industry to get into the groove, but our timescale is long. In History 3, we start in 2024 at Špin 1, then increase Špin once a year until in 2055 and Spin32, then continue to 2080. By which point, in this simulation, Malawi has a 1% share of global GDP, and 6.25% of its money has created 10 million Spartan (social) houses, enough for the current population and as many again. And another 6.25% is allocated to solar-powered desalinization systems providing water for 60 million, enough for the whole population, agriculture, and even the filling of millions of swimming pools.

But this is only the beginning. Today, work is focused on History 4. But by the time we reach the year 2080, there will have been in the order of 87 Quintillion different Histories. (See spreadsheet tab: 87 Quintillion Histories.)

ANGEL THEORY

M-Systems

S-WORLD ANGELWING (2019)

S-World Angelwing is the catch-all name for all S-World software systems and designs including the following:

The TBS™ (Total Business Systems) and S-Web™ (makes websites), S-World BES™ (Behavioral Economic Systems), S-World Film™, S-World TMS™ (Total Marketing System), S-World TFS™ (Total Financial Systems), S-World VSN™ (Virtual Social Network) and VBN™ (Virtual Business Network), S-World UCS™ Simulator et al., S-World AE (Aid Efficiency), S-World DCA™ (Dynamic Comparative Advantage), S-World PQS™ (Predictive Quantum Software), S-World TTEB™ The Theory of Every Business, S-World.gov, Tax Symmetry, and other M-Systems.

S-World Š-ŘÉS-v6™ is currently the standout feature in the S-World Angelwing Economic Framework. This system is described in Supereconomics Part 3 'The How.'
